SHAKEDOWN is a project which is a realisation of what experiencing a rally stage is like through the POV of the driver. Shakedown is an opportunity for crews to test out their cars before a race to see if the setup they have chosen is good or not for the specific stage and to see if there are any last minute tweaks to be made before the official race. My aim is to emulate the feeling of driving through a rally stage where there is more of a reliance on hearing the co-driver's pacenotes over any other sense including sight. The rally stage I chose was Tolt Valley Sprint Forward in New England, USA.
